QA TEST REPORT

OCW-24010 — View Panel Modernization: Bill, International Payment, Vendor Credit, Webhook Log & API Log

Module: Payables / Developer Panel — V4 Detail Panels · Environment: Staging (feature build) · 30 Sep 2026

Purpose: Confirm that the Bill, International Payment, Vendor Credit, Webhook Log and API Log detail (view) panels follow the V4 detail-panel design and the supplied reference UI, stay consistent with the Payment Out panel, and keep their existing actions working.

Task Details

Field	Detail
Task ID	OCW-24010 (sub-task of OCW-23713 — View Panel Modernization, All Data Tables)
Module	Payables — Bills, Vendor Credit, International Payment; Settings › Developer Panel — API Logs, Webhook Logs
Features	V4 detail side panel: header, actions, detail cards, tile tabs (audit logs / comments / attachments / receipts), expand / collapse, dark mode
Environment	Staging feature build ocw-24010-midhun.web.ocw.sebipay.com, Chrome (1920 px viewport), Version 2.0 UI
Reference	ViewPanels-Latest.html (Bills and International Payment designs); Payment Out V4 panel for the other three pages
Status	QA Fail

Task Overview

The task restyles five view pages as V4 detail side panels. Each panel was opened from its data table in the build and checked against the reference UI, or against the Payment Out panel where the reference has no design. The checks covered layout, actions per record status, tiles, expand/collapse, dark mode and typography, and non-destructive actions were run end-to-end (Pay, Edit, Clone, Send proof, comments, links). All five panels render in the new design. International Payment, API Log and Webhook Log passed. Two actions that exist in the row menu are missing from the panels (**Clone Bill** on Bill and **Mark As Reconciled** on Vendor Credit), and the Unvoid button colour differs from the design, so the task fails QA. The responsive checks could not be run in this session.

Issue / Requirement Description

- The Bill, International Payment, Vendor Credit, Webhook Log and API Log view pages used the old layout.

- Requirement: Redesign them per the linked UX task using `/v4-detail-panel` as the reference, matching Payment Out / Payment In, reusing V4 components, and keeping spacing, typography, actions, responsive behaviour and panel interactions consistent.
- Constraint: Existing business logic, API integrations and functionality must be preserved unless the UX task changes them.

Updates / Changes Implemented

- Bill: right-side drawer with amount + status badge, Invoice ID / Payee, status-based actions (Pay / Print / Unvoid + ⋮), Bill Details card with Bill Total highlight, Vendor Information (Bill From / Bill To), Line Items (credit applied) when present, and Audit Logs / Comments / Attachments tiles.
- International Payment: "Payment Details" drawer with Clone and Send proof, Transaction details, Transaction ID strip, Statement table, Beneficiary (Details / Bank Details tabs), and Comments / Attachments / Signed Receipt / Proof of Delivery tiles.
- Vendor Credit: drawer with Credit details, Vendor details (Open payee), Applied to bills and Audit logs / Comments / Attachments tiles; Edit + ⋮ according to status.
- API Log: request line + response-status badge, Request details, Request / Response code blocks with Copy. Webhook Log: event type + status badge, Event details, Payload code block with Copy.
- All panels: expand / collapse toggle, close, collapsible cards, and V4 colour tokens in light and dark mode.

Testing & Verification

Bill

- Verified that the panel matches the reference layout: header with amount (Funnel Display 17 px / 700) and Due / Paid / Voided badge, Bill Details rows, Bill Total highlight, and Vendor Information with avatars. Pay Status appears only in the expanded view, as in the reference.
- Confirmed that Pay opens Send Payment pre-filled with the bill (amount, payee, memo "Payment for Bill 1120") and that Edit opens the Edit Bill modal pre-filled. Neither was submitted.
- Confirmed that the Paid bill shows Print + ⋮ (Delete), matching the reference.
- Found that the Due bill ⋮ menu lacks **Clone Bill**. The Voided bill ⋮ menu (Print, Delete) also lacks it, and Unvoid is brand blue instead of the red outline in the reference. The row ⋮ menu for the same bill still offers Clone Bill.
- Verified the tiles: audit log with "Show 13 more"; comments (posted a test comment; an empty comment shows "Enter a comment before posting."); and the attachments list with Upload attachment.
- Verified expand / collapse, collapsing a card, close and reopen, the sticky header while the body scrolls, and dark mode.

International Payment

- Verified that every section and tile of the reference is present and in order. Transaction details, the Statement history and both Beneficiary tabs show record data. Signed Receipt and Proof of Delivery empty states use the reference copy.
- Confirmed that Clone opens Send Payment pre-filled (amount, wallet, payee, International Payment, INR). Send proof opens the existing Send Payment Proof options (Print Receipt, Copy Link, Email, Download, SMS, WhatsApp). Nothing was sent.
- Confirmed the expanded two-column layout and the Failed-payment state (red badge, Purpose row, full statement history).

Vendor Credit

- Verified the panel for New, Partially Paid and Reconciled credits. No actions appear when the row menu has all actions disabled (Partially Paid); Reconciled shows ⋮ with Delete only.
- Confirmed that Edit opens the Edit Vendor Credit modal pre-filled, that Open payee opens the payee record, and that the Applied-to-bills reference opens the linked bill panel.
- Found that for a New credit the panel ⋮ shows Void and Delete only, while the row menu also offers **Mark As Reconciled**.

API Log & Webhook Log

- Reached both through Settings › More › Developer Panel. Verified the request line + 200 (green) / 422 (red) badges, Request details, Request / Response toggle, and Copy ("Copied!").
- Verified the Webhook Log panel: event type + Failed badge, Event details, payload JSON with Copy, and expand / collapse.

Consistency

- Confirmed that all five panels use the same shell as the Payment Out V4 panel: icon, title/amount with badge and sub-line, expand ⤢ / close, action row, collapsible cards and tile tabs.

Test Cases Executed

ID	Test Scenario	Expected Result	Status
TC01	Bill — open detail panel from the eye icon	Drawer per reference: header, Bill Details with Bill Total, Vendor Information, three tiles	**Passed**
TC02	Bill (Due) — Pay + ⋮ menu	Print, Edit, Void, Delete, Mark As Paid, Clone Bill. Observed: Clone Bill missing	**Failed**
TC03	Bill — Pay action	Send Payment opens pre-filled for the bill	**Passed**
TC04	Bill — ⋮ › Edit	Edit Bill modal pre-filled	**Passed**
TC05	Bill (Paid) — actions and content	Print + ⋮ Delete; credit shown under Line Items; audit "Show more" works	**Passed**

ID	Test Scenario	Expected Result	Status
TC06	Bill (Voided) — actions	Unvoid (red outline) + ⋮ Print, Clone Bill, Delete. Observed: Clone Bill missing, Unvoid blue	Failed
TC07	Bill — Audit Logs, Comments (add, empty validation), Attachments tiles	Lists load; comment posts; empty comment shows inline error; upload button shown	Passed
TC08	Bill — expand / collapse, card collapse, close / reopen	Layout switches correctly; Pay Status only in expanded view	Passed
TC09	Bill — dark mode and typography	Dark tokens applied; Funnel Display amount, Plus Jakarta Sans body	Passed
TC10	International Payment — open panel	Payment Details header, Clone / Send proof, Transaction details, Transaction ID, Statement	Passed
TC11	International Payment — Beneficiary Details / Bank Details tabs	Tabs switch and show beneficiary and bank data	Passed
TC12	International Payment — Comments, Attachments, Signed Receipt, Proof of Delivery	Tiles switch; empty states match reference copy	Passed
TC13	International Payment — Clone and Send proof	Clone opens pre-filled payment; Send proof opens proof options	Passed
TC14	International Payment — expanded view and Failed payment	Two-column layout; Failed badge and status history	Passed
TC15	Vendor Credit — panel for Partially Paid and Reconciled credits	Credit details, Vendor details, Applied to bills, tiles; actions follow status	Passed
TC16	Vendor Credit (New) — panel actions	Edit, Void, Mark As Reconciled, Delete. Observed: Mark As Reconciled missing	Failed
TC17	Vendor Credit — Edit, Open payee, Applied-to-bills link	Edit modal pre-filled; payee opens; linked bill panel opens	Passed
TC18	API Log — panel, Request / Response, 200 and 422, Copy, expand	Details and code blocks shown; status badge colour by result; Copy confirms	Passed
TC19	Webhook Log — panel, payload, Copy, expand	Event details and payload JSON shown	Passed
TC20	Consistency with Payment Out V4 panel	Same shell, header, actions and card pattern	Passed
TC21	Responsive behaviour (1024 / 768 / 390 px)	Panel adapts to smaller widths. Chrome window was maximized and could not be resized	Blocked
TC22	Destructive / dialog actions: Print, Void, Unvoid, Delete, Mark As Paid, upload, delete comment, Get Signed Receipt	Existing behaviour unchanged. Not run: they change records or open native dialogs	Not tested

Defects Found

Case	Defect	Severity	Bug	Status
TC02, TC06	Bill panel ⋮ menu has no Clone Bill (Due and Voided bills). The reference includes it, and the row ⋮ menu still offers it.	Medium	—	**Open**
TC16	Vendor Credit panel (New credit) ⋮ menu has no Mark As Reconciled, which the row menu offers.	Medium	—	**Open**
TC06	Voided bill: Unvoid is brand blue instead of the red outline in the reference.	Low	—	**Open**

Observations and open questions

- Paid bill with credit: the header shows $565.00 (bill amount), while Bill Total and the grid show $465.00. Panel Bill To shows "David"; grid Bill To shows "david bnk".
- The Attachments tiles (Bill, International Payment, Vendor Credit) list the storage path instead of the file name.
- The Bill audit log shows the new "Comment Added" entry only after the panel is reopened.
- Vendor Credit: the Applied-to-bills Reference shows an internal ID instead of the invoice number, and its date format ("Jul 30, 2026 – 08:10 am") differs from other panels. Field labels are sentence case, unlike Bill and Payment Out. A Reconciled payee credit shows "hasn't been applied to any bills yet" with an applied amount of $52.00.
- International Payment: Send proof is offered on a Failed payment. Webhook Log: no response code or body is shown for failed deliveries.
- No reference design was supplied for Vendor Credit, Webhook Log or API Log; these were checked against the Payment Out pattern.

Conclusion

All five view pages now open as V4 detail side panels on the staging feature build, consistent with the Payment Out panel. International Payment, API Log and Webhook Log match the reference and pattern, and their tested actions work. The Bill and Vendor Credit panels drop actions that the row menus still provide (Clone Bill, Mark As Reconciled), and the Unvoid styling deviates from the design. These need fixing before sign-off. The responsive checks were blocked, and the destructive actions were not run.

Status: QA Fail
