QA TEST PLAN · QA SCHEDULED

Affiliate Dashboard — V2 Referral System UI Implementation

QA task OCW-24311 · Dev task OCW-24304 · Zil Money V2 (new version) · 29 Sep 2026

> **Purpose:** define what will be tested, how, with which data and by when, so that the new Affiliate Dashboard can be verified against the approved state frames (desktop, dark and ≤785px) — layout, typography, every flow and modal — while the existing referral, coupon and payout behaviour stays intact.

1. Task summary

QA Task	OCW-24311 — QA Scheduled — V2 Referral System UI Implementation (Dashboard)
Development Task	OCW-24304 — V2 Referral System UI Implementation (Dashboard); parent OCW-22811 Net Revenue-Based Referral System
Modules	Affiliate Dashboard (More → Affiliate) — referral link, coupons, click details, earnings, withdrawal history, payout, earnings chart, referral commission
Interface	Zil Money V2 (new version) — desktop, dark theme and ≤785px layout
Design Reference	Affiliate Dashboard - States (2).html (OCW-22810, 29 Sep 2026) — frames A1–A10, B1–B4, C1–C4, D1–D2
Status	Pending

2. Objective

OCW-24304 implements the referral (affiliate) dashboard in the new version from the approved UX design in OCW-22810. The ticket carries a one-line description and no acceptance criteria, so the design state frames are the specification. QA will confirm that each state — empty, populated, payout request and confirmation, withdrawal history, share, commission structure, credit adjustment, coupon enabled and terms — matches the design in layout, content, typography and colour; that every control works; that the page reflows correctly at ≤785px and in dark theme; and that referral, coupon and payout data shown on the page agree with the backend. Anything that differs between the ticket, the design file and the build, or that the design leaves undefined is raised with the PM rather than resolved silently.

3. Test scope

3.1 In scope

Area	Existing component (staging baseline)	New V2 behaviour	Design frame
Page shell and stat cards	affiliate-pap-dashboard, affiliate-pap-insight (modules/more/)	Total earnings, Approved + Withdraw, Pending, Total referrals	A1, A2
Referral link	affiliate-pap-my-link, share-referral-link, affilate-terms-and-condition	Link field, ✎, Copy link, Share modal, Terms modal	A2, A6, A10
Coupons	affiliate-pap-set-coupon	Code + credit amount, Enable coupon, status toggle, credit adjustment modal	A2, A8, A9
Activity tabs	affiliate-pap-dashboard-table, referal-activity	Click details, Earnings, Withdrawal history + period chips	A2, A5, C4
Payout	request-to-payout-modal (route withdraw)	Request to payout modal, submitted status modal	A3, A4, A5
Chart and commission	affiliate-pap-insight	Total earnings chart Monthly / Quarterly, Referral commission card + Commission structure modal	A2, A7

Checks applied to every state:

- Layout, order and content against the matching design frame at 1536 × 840.
- Typography — font family, size, weight and colour against the design (Funnel Display for titles and values, Funnel Sans for text).
- Every button, link, tab, chip, toggle, sort and pagination control performs its action.
- Modals — open, close with ×, Cancel, Escape and backdrop; page state unchanged after cancel.
- Values shown match the backend (earnings, balances, referrals, coupons, withdrawals).
- Dark theme and the ≤785px reflow.

3.2 Out of scope

- Commission calculation and net-revenue logic (OCW-23163, OCW-24210) — values are checked for display only.
- Superadmin settings, dashboard and payout release (OCW-22918, currently On-Hold) — payout approval and actual payment are not tested.
- Sign-up with a referral link or coupon by a new user — only the affiliate's dashboard is in scope; a referral attribution check is listed under regression if test data allows.
- Classic version affiliate pages — regression check only.

4. Acceptance criteria

Derived from the OCW-24304 description ("Implement Referral System UI in ZilMoney V2 based on approved designs") and the state frames of the approved design. To be confirmed with the PM.

ID	Acceptance criterion
AC01	The Affiliate Dashboard in the new version matches the approved design frames in layout, content, typography and colour.
AC02	A first-time affiliate sees the empty state: $0.00 cards with helper text, Withdraw disabled, empty coupon, click and chart states (A1).
AC03	Stat cards show Total earnings, Approved (with Withdraw), Pending and Total referrals with their sub-lines, using backend values (A2).
AC04	The referral link can be copied and shared (Copy link, Email, SMS, WhatsApp), and Terms and conditions open from the card (A6, A10).
AC05	An affiliate can create a coupon with a code and a first-month credit, see it at the top of the list with a success banner, toggle its status and view the credit adjustment table (A8, A9).
AC06	Click details, Earnings and Withdrawal history tabs show their tables with period filters, sorting and pagination.
AC07	From Approved → Withdraw, an affiliate can request a payout; a confirmation shows status, reference, date and expected payout, and the request appears as Pending review in Withdrawal history (A3–A5).
AC08	The Total earnings chart switches Monthly / Quarterly, and the Referral commission card opens the Commission structure modal (A7).
AC09	Dark theme applies the dark tokens to the same layout; badges stay readable and the chart is recoloured (B1–B4).
AC10	At ≤785px the page reflows: sidebar → hamburger drawer, stat row → KPI stack, tables → stacked cards, tabs → chip row, modals compact and centred (C1–C4, D1–D2).
AC11	Existing referral, coupon and payout behaviour and data are unchanged by the new UI.

5. Test approach

- **Design comparison:** open each design frame (served locally) next to the build at 1536 × 840 and compare order, spacing, content and states.
- **Typography:** read computed styles in DevTools for page title, stat labels/values, card titles, buttons, table headers and modal text, against the design values.
- **Functional:** exercise every control once on an account with data and once on an account with no affiliate activity.
- **Data check:** compare stat cards, tables and chart with the API response for the same account; compare with the existing (classic) affiliate page for the same account.
- **Payout:** use a test account with an approved balance above $100 on staging; record the reference created. Approval and payment are not exercised.

- **Responsive:** DevTools device toolbar at 1920, 1536, 1280, 1024, 785, 768 and 390px, plus a live resize across 785px.
- **Browsers:** Chrome (primary), Edge, Firefox and Safari.
- **Test data:** two companies — one with referrals, coupons, clicks and withdrawals; one never used as an affiliate — plus a second company for cross-company checks.

6. Test cases

Status is Not tested until execution. Frame references are to the design file.

6.1 Navigation and page layout

ID	Test Scenario	Expected Result	Status
TC01	Open the Affiliate Dashboard from the sidebar (More) in the new version	Page loads with title "Affiliate Dashboard", back arrow, stat row, left column (link, coupon, tabs) and right column (chart, commission)	**Not tested**
TC02	Compare the populated page with frame A2 at 1536 × 840	Same order, spacing, card structure and content as the design	**Not tested**
TC03	Click the back arrow next to the title	Returns to the previous page; behaviour to confirm with PM	**Not tested**
TC04	Load the page on a slow network (DevTools Slow 3G)	Loading state shown for cards, tables and chart; no layout jump when data arrives	**Not tested**
TC05	Reload the page and deep-link to the dashboard URL	Page loads the same data; the sidebar highlights the correct menu item	**Not tested**
TC06	Switch to classic version from the top bar and back	Classic affiliate page still opens; returning shows the new dashboard	**Not tested**

6.2 Stat cards and empty state

ID	Test Scenario	Expected Result	Status
TC07	Open the dashboard as a company with no affiliate activity (A1)	All four cards $0.00 / 0 with "Lifetime, all referrals", "Nothing to withdraw yet", "No commissions in review", "Invite your first customer"	**Not tested**
TC08	Check Withdraw on the empty state	Withdraw is disabled and cannot open the payout modal	**Not tested**
TC09	Check empty coupon, click and chart states (A1)	"No coupons yet — Codes you create will show up here."; "No clicks yet — Visits to your referral link will show up here."; chart "2026 · no earnings recorded"	**Not tested**
TC10	Open the dashboard as a company with activity (A2)	Total earnings, Approved, Pending and Total referrals match the API; sub-lines "Available to withdraw", "n commissions in review", "+n in the last 30 days"	**Not tested**

ID	Test Scenario	Expected Result	Status
TC11	Check card maths	Total earnings = Approved + Pending (e.g. $3,240.00 + $942.35 = $4,182.35), or the rule the PM confirms	Not tested
TC12	Very large balances (e.g. $1,234,567.89)	Formatted with separators and two decimals; fits the card without clipping	Not tested
TC13	Approved balance above $0 but not above $100	Withdraw state and message match the rule the PM confirms	Not tested

6.3 Referral link, share and terms

ID	Test Scenario	Expected Result	Status
TC14	Check the referral link field	Shows the company's own link (https://zilmoney.com/ref/<id>), read-only, matching the existing page	Not tested
TC15	Click Copy link	Link copied to clipboard; copied feedback shown; pasted value equals the displayed link	Not tested
TC16	Click Share (A6)	"Share referral link" modal with Copy link, Email, SMS, WhatsApp	Not tested
TC17	Choose Email, SMS and WhatsApp in turn	Each opens its channel with the referral link prefilled (behaviour to confirm with PM)	Not tested
TC18	Click the edit (✎) icon on the link	Behaviour to confirm with PM; no unintended change to the link	Not tested
TC19	Click Terms and conditions (A10)	Modal shows the yearly-subscription credit rule text exactly as the design	Not tested
TC20	Close each modal with ×, Escape and backdrop click	Modal closes; page state unchanged	Not tested
TC21	Open the referral link in a private window	Lands on the sign-up page with the referral applied; a click row is recorded (regression, if test data allows)	Not tested

6.4 Coupons

ID	Test Scenario	Expected Result	Status
TC22	Check the coupon form on load	Coupon code (placeholder "e.g. zil-spring26"), Credits — 1st month commission (placeholder "Enter credit amount", ⓘ tooltip); Enable coupon disabled until both are valid	Not tested
TC23	Create a coupon with a valid code and credit (e.g. zil-qa26, $150)	Success banner "Coupon <code> is enabled. New users can apply it at sign-up for a $150.00 credit."; new row on top with Applied users 0 and status on (A9); form clears	Not tested
TC24	Dismiss the success banner (×)	Banner closes; table unchanged	Not tested

ID	Test Scenario	Expected Result	Status
TC25	Code shorter than 4 or longer than 10 characters	Rejected with an inline message, same limits as the existing page (4–10), or the limits the PM confirms	Not tested
TC26	Duplicate code (an existing code, different case)	Rejected with a clear message; no second row	Not tested
TC27	Code with spaces or special characters	Rejected or sanitised per the agreed rule; nothing unsafe stored	Not tested
TC28	Credit amount 0, negative, non-numeric, decimals, above the highest tier ($450)	Invalid values rejected with inline message; allowed range to confirm with PM	Not tested
TC29	Double-click Enable coupon	Only one coupon created	Not tested
TC30	Toggle a coupon's status off and on	Toggle state saved and persists after reload; effect on sign-up per PM	Not tested
TC31	Coupon with no applied users	Applied users shows "—" or 0 consistently (design shows both — to confirm with PM)	Not tested
TC32	Click Credit adjustment info (A8)	Modal with explanatory text and tier table $100 → 50%, $150 → 48.5% … $450 → 39.5%, matching the backend tiers	Not tested
TC33	Hover / focus the ⓘ next to Credits	Tooltip explains the first-month commission credit	Not tested

6.5 Click details, Earnings and Withdrawal history

ID	Test Scenario	Expected Result	Status
TC34	Open Click details (default tab)	Columns Date, Click ID, Link refer ID, IP address, Source; "Showing 1–5 of N clicks"; newest first	Not tested
TC35	Open Earnings	Columns Date, Referral, Commission (type · %), Amount, Status (Approved / Pending)	Not tested
TC36	Open Withdrawal history (A5)	Columns Requested, Method (e.g. ACH · Chase ••4021), Amount, Reference, Status (Pending review / Paid)	Not tested
TC37	Select All time, Last 30 days, Last 90 days, This year on each tab	Rows and "Showing x of N" count change to the selected period	Not tested
TC38	Sort by each ↕ column	Ascending then descending; dates and amounts sort numerically	Not tested
TC39	Paginate with ‹ ›	Next / previous page; count text correct; ‹ disabled on first page, › on last	Not tested
TC40	Switch tabs after filtering or paging	Each tab keeps or resets its filter as agreed; no stale rows from another tab	Not tested
TC41	Tab with no data for the period	Empty state text and "Nothing to show"; pagination disabled	Not tested

ID	Test Scenario	Expected Result	Status
TC42	Compare tab data with the existing affiliate report for the same account	Same records and amounts	Not tested

6.6 Request to payout

ID	Test Scenario	Expected Result	Status
TC43	Click Withdraw on the Approved card (A3)	"Request to payout" modal: Approved balance equal to the card, Approved amount input, note "only withdrawal requests for amounts greater than $100 will be processed.", Cancel, Request payout	Not tested
TC44	Click Cancel	Modal closes; no request created	Not tested
TC45	Request a valid amount (e.g. $150)	"Payout request submitted" modal (A4): amount, Status Pending review, Reference WD-…, Requested on today, Expected payout "Within 3–5 business days"	Not tested
TC46	Click View withdrawal history	Modal closes; Withdrawal history tab shows the new request first as Pending review with the same reference (A5)	Not tested
TC47	Click Done on the submitted modal	Modal closes; Approved and Pending values refresh per the agreed rule	Not tested
TC48	Amount $100.00 exactly, $99.99 and $100.01	Boundary follows the "greater than $100" rule — confirm with PM whether $100.00 is allowed	Not tested
TC49	Amount above the approved balance	Rejected with a clear message; no request created	Not tested
TC50	Empty, zero, negative, letters, three decimals	Rejected with inline validation; Request payout disabled or shows error	Not tested
TC51	Double-click Request payout	Only one withdrawal request created	Not tested
TC52	API error while requesting (e.g. server rejects)	Existing error message shown; modal stays open; no false success	Not tested
TC53	Payout method shown in history	Bank account masked to last 4 digits (••4021); Check draft labelled as such	Not tested

6.7 Earnings chart and referral commission

ID	Test Scenario	Expected Result	Status
TC54	Check the Total earnings chart (Monthly)	"2026 · monthly commission payouts"; Jan–Dec bars match monthly payouts from the API; axis scale fits the data	Not tested
TC55	Switch to Quarterly and back	Four quarters with summed values; toggle state highlighted	Not tested

ID	Test Scenario	Expected Result	Status
TC56	Hover a bar	Tooltip with period and amount	Not tested
TC57	Check the Referral commission card	50% first-month fees, 5% first 12 monthly fees, 2% credit card fees "equals 5.9 bps", matching configured rates	Not tested
TC58	Open Commission structure from the card (A7)	Modal lists Initial subscription payment 50%, Monthly subscription 5% for 12 months, Credit card processing 2% (5.9 bps)	Not tested
TC59	Chart with no earnings (A1)	Empty axis 0–1 with "no earnings recorded"; no errors	Not tested

6.8 Typography

ID	Test Scenario	Expected Result	Status
TC60	Page title	Funnel Display 19px / 600 / #111827	Not tested
TC61	Stat card label, value and sub-line	Label Funnel Sans 12.5px / 500 / #6B7280; value Funnel Display 25px / 700 / #111827; sub-line 11.5px / 400 / #9CA3AF	Not tested
TC62	Card titles (e.g. Your referral link)	Funnel Display 15px / 600 / #111827	Not tested
TC63	Buttons — Copy link (primary), Withdraw / Enable coupon (outline)	Copy link 14px / 500 white on navy; outline buttons 13px / 500 / #20319D	Not tested
TC64	Commission percentages	Funnel Display 20px / 700; 50% in #7924FF (per design)	Not tested
TC65	Payout note and helper text	Funnel Sans 12px / 400 / #6B7280	Not tested

6.9 Responsive and dark theme

ID	Test Scenario	Expected Result	Status
TC66	1920 and 1280px	Two-column layout holds; nothing stretched or clipped	Not tested
TC67	785px and below — page (C1)	One-column reflow; stat row becomes KPI stack; top bar shows "Re-verify" and credits	Not tested
TC68	Hamburger menu at ≤785px (C2)	Opens the off-canvas sidebar; closes on selection or backdrop	Not tested
TC69	Tables at ≤785px (C1, C4)	Click details and Withdrawal history show stacked cards with labelled fields; coupon table readable	Not tested
TC70	Tabs and period filters at ≤785px	Shown as a chip row; scrollable without page overflow	Not tested
TC71	Modals at ≤785px (C3)	Compact and centred; inputs and buttons reachable; no horizontal scroll	Not tested

ID	Test Scenario	Expected Result	Status
TC72	390px mobile	All content readable; long link and codes wrap or truncate without overlap	Not tested
TC73	Dark theme — populated and empty (B1, B2)	Dark tokens on the same layout; badges stay light-chip; chart recoloured; text readable	Not tested
TC74	Dark theme — modals (B3, B4)	Dark modal shell; inputs, note and buttons readable	Not tested
TC75	Dark theme at ≤785px (D1, D2)	Reflow and dark tokens together; nothing dropped	Not tested

6.10 Security and compliance (payouts / PII)

ID	Test Scenario	Expected Result	Status
TC76	Company B opens the dashboard	Sees only its own link, coupons, clicks, earnings and withdrawals — never Company A's	Not tested
TC77	Call the payout or coupon API with another company's id	Refused (403/404); no data returned or created	Not tested
TC78	Sub-user / invited user without affiliate permission	Page, Withdraw and Enable coupon hidden or refused, same as the existing page	Not tested
TC79	Coupon code containing <script> or HTML	Rejected or stored and shown as plain text; nothing executes	Not tested
TC80	Amount sent directly to the payout API below $100 or above balance	Server rejects it — the limit is not only in the UI	Not tested
TC81	Click details IP addresses	Display agreed with compliance (full vs masked — to confirm); no other visitor PII shown	Not tested
TC82	Console, network and URL during all flows	No tokens or PII in console or query strings; no failed requests	Not tested

7. Regression scope

ID	What Will Be Checked	Expected Result	Status
RT01	Classic affiliate page (manage/affiliate) — shares modules/more components	Still loads and works; values match the new dashboard	Not tested
RT02	Affiliate join / welcome flow for a non-affiliate	Unchanged; after joining, the new empty state appears	Not tested
RT03	Affiliate report and referral activity pages	Unchanged data and behaviour	Not tested
RT04	Sign-up with a referral link and with a coupon code	Referral attributed; coupon credit applied (if test environment allows)	Not tested
RT05	Existing coupons created on the old page	Appear in the new table with correct amount, users and status	Not tested

ID	What Will Be Checked	Expected Result	Status
RT06	Existing withdrawal requests	Appear in Withdrawal history with correct method, amount, reference and status	**Not tested**
RT07	Sidebar, top bar, company switch	Navigation unaffected; dashboard reloads for the switched company	**Not tested**
RT08	Light / dark theme toggle on other pages	No style leakage from the new dashboard	**Not tested**

8. Traceability matrix

Acceptance criterion	Test cases	Regression
AC01 — matches design	TC01–TC06, TC60–TC65	RT07
AC02 — empty state	TC07–TC09, TC41, TC59	RT02
AC03 — stat cards	TC10–TC13	RT01
AC04 — referral link, share, terms	TC14–TC21	RT04
AC05 — coupons	TC22–TC33, TC79	RT04, RT05
AC06 — activity tabs	TC34–TC42, TC81	RT03
AC07 — payout	TC43–TC53, TC80	RT06
AC08 — chart and commission	TC54–TC59	—
AC09 — dark theme	TC73–TC75	RT08
AC10 — ≤785px reflow	TC66–TC72, TC75	—
AC11 — existing behaviour unchanged	TC42, TC76–TC82	RT01–RT08

9. Entry and exit criteria

Entry criteria

- OCW-24304 is dev-complete and deployed to the QA environment, with unit test evidence attached.
- Test data available: an affiliate company with referrals, coupons, clicks, an approved balance above $100 and past withdrawals; a company with no affiliate activity; a second company for cross-company checks.

Exit criteria

- All test cases and regression checks executed.
- No open Critical or High defects; Medium/Low defects agreed with the PM for later fix.
- Payout and coupon validation confirmed on the server, not only in the UI.
- QA test report delivered with Status: QA Pass.
