QA TEST REPORT

OCW-24573 — Incorrect Bank Account Type for Plaid-Linked Bank Accounts

Module: Bank Accounts · Environment: Staging · 09 Oct 2026

> **Purpose:** Confirm that a bank account added through Plaid gets the correct bank account type automatically, instead of a numeric value, in both the new and the classic design.

Task Details

Field	Detail
Task ID	OCW-24573 (parent OCW-24572)
Module	Bank Accounts (backend)
Features	Add bank account via Plaid, Bank Account Information, account type mapping
Environment	Staging — new design and classic design
Status	**QA Pass**

Task Overview

This backend sub-task fixes the bank account type for bank accounts linked through Plaid. Previously, the account type came through as a number (for example 1) instead of an account type name. QA linked bank accounts through Plaid in both the new and the classic design. The bank account type now fills in automatically from the Plaid account selected: a Plaid checking account becomes Business Checking, and a Plaid savings account becomes Personal Savings. The fix works as expected.

Issue / Requirement Description

- When a bank account was added through Plaid, the bank account type was fetched as a numeric value (for example 1) instead of the correct account type.
- Requirement: the account type of the Plaid account selected must map to the correct bank account type automatically.

Updates / Changes Implemented

- The backend maps the Plaid account type to the bank account type: Plaid checking → Business Checking, Plaid savings → Personal Savings.
- The bank account type now appears as the correct name, not as a numeric value.

Testing & Verification

New design

- Verified that adding a bank account through Plaid with a checking account sets the account type to Business Checking.
- Verified that adding a bank account through Plaid with a savings account sets the account type to Personal Savings.

Classic design

- Verified that a Plaid checking account sets the account type to Business Checking.
- Verified that a Plaid savings account sets the account type to Personal Savings.

Test Cases Executed

ID	Test Scenario	Expected Result	Status
TC01	New design — add bank account via Plaid, select a checking account	Account type set to Business Checking automatically	**Passed**
TC02	New design — add bank account via Plaid, select a savings account	Account type set to Personal Savings automatically	**Passed**
TC03	Classic design — add bank account via Plaid, select a checking account	Account type set to Business Checking automatically	**Passed**
TC04	Classic design — add bank account via Plaid, select a savings account	Account type set to Personal Savings automatically	**Passed**
TC05	Account type value shown after a Plaid link	Account type name shown, not a numeric value	**Passed**

Conclusion

A bank account linked through Plaid now gets the correct bank account type automatically: Plaid checking becomes Business Checking, and Plaid savings becomes Personal Savings. The numeric value no longer appears. Verified on staging in both the new and the classic design.

Status: QA Pass
