QA TEST REPORT

OCW-25067 — Remove Outdated Sample Formation Document from Level 2 Business Verification

Module: Business Verification — Level 2 · Environment: Staging · 26 Oct 2026

> **Purpose:** Confirm that the outdated generic sample formation document and its reference PDF are gone from Level 2 Business Verification, while the state-specific examples and the document upload flow still work.

Task Details

Field	Detail
Task ID	OCW-25067 (sub-task of OCW-25066)
Module	Business Verification — Level 2 (formation document step)
Features	Removal of the generic sample formation document and its PDF, state-wise "View examples", document upload and submission
Environment	Staging — https://staging.web.ocw.sebipay.com
Test evidence	Tester's Loom recording, linked in the Jira comments
Status	**QA Pass**

Task Overview

The Level 2 business verification step showed a generic "Sample formation document" section next to the state-specific formation document examples. This could confuse users and lead to wrong uploads. The build removes the generic section and its PDF and keeps the state-wise examples. QA tested the Level 2 business verification step on staging: the generic sample no longer appears, "View examples" still shows the state-specific examples, and document upload and submission work as before.

Issue / Requirement Description

- Reported: Level 2 business verification showed both a generic sample formation document ("Sample formation document – Reference PDF to guide your upload") and state-specific examples.
- Requirement: remove the outdated "Sample formation document" section and its downloadable reference PDF.
- Requirement: keep the state-specific formation document examples and the "View examples" option.
- Constraint: document upload and submission must not change, and the removal must apply wherever the outdated sample appeared in the Level 2 workflow.

Updates / Changes Implemented

- The "Sample formation document – Reference PDF to guide your upload" section is no longer shown in Level 2 business verification.
- The download option for the generic reference PDF is gone.
- The state-specific formation document examples are still available through "View examples".

Testing & Verification

Outdated sample removed

- Verified that the "Sample formation document" section is no longer shown in the Level 2 business verification step.
- Verified that the generic reference PDF can no longer be downloaded from the step.
- Confirmed that the outdated sample does not appear anywhere else in the Level 2 workflow.

State-specific examples retained

- Verified that "View examples" is still shown and opens the state-specific formation document examples.

Upload and submission regression

- Confirmed that the formation document can still be uploaded and that Level 2 verification can still be submitted as before.
- Confirmed that the rest of the step's layout looks correct after the section was removed.

Test Cases Executed

ID	Test Scenario	Expected Result	Status
TC01	Open the formation document step of Level 2 business verification	"Sample formation document – Reference PDF to guide your upload" is not shown	**Passed**
TC02	Look for the generic reference PDF download	No download option for the outdated sample PDF	**Passed**
TC03	Click "View examples"	State-specific formation document examples are shown	**Passed**
TC04	Check the rest of the Level 2 workflow for the outdated sample	The outdated sample does not appear anywhere	**Passed**
TC05	Upload a formation document	The upload works as before	**Passed**
TC06	Submit Level 2 business verification	Submission works as before	**Passed**
TC07	Layout of the step after the removal	No empty gap or broken alignment where the section used to be	**Passed**

Conclusion

The outdated generic sample formation document and its reference PDF have been removed from Level 2 Business Verification. The state-specific formation document examples are still available through "View examples", and document upload and submission work as before. Tested on staging; the tester's Loom recording is linked in the Jira comments.

Status: QA Pass
